

# **Palina Skakun**

My personal resume website showcases my educational background, professional journey, my skills, technology I worked with, some of my personal background, and my CV to assist me with internship and job search.

My personal resume website presents my educational background, technical skills and experiences in a way that engaging, visually appealing, and showcases my knowledge of design and web development. The website goes in detail about my technical knowledge and relevant experiences where it was applied, my professional journey that consists of internships and part-time jobs. It presents ways to contact me and a quick overview of my social media activity, such as LinkedIn, and a technical portfolio, such as GitHub. My CV is available for a quick look and for download when a recruiter considers me a good candidate for a position. A small section of the website also mentions my hobbies and shows a more personal side of me to get a sense of what kind of person I am and what experiences and backgrounds I would bring to a potential team of developers.

## **Personas**

1. Technical company recruiter looking for junior software/web developers.
2. Technical startup founder looking to hire a software/web developer.
3. Local small business owner looking to create a web page to promote their business.

## **Comps**

1. <https://www.pascalvangemert.nl>
2. <https://mattfarley.ca>
3. <https://n.foxdsgn.com/niko/>
4. <https://sergeydesigner.pro/>
